Home: No 14 Owhoro Avenue, Rhumuewhara Portharcourt, Port Harcourt (Nigeria)

ABOUT ME

A B.Tech Information Technology graduate from Marwadi University with a specialized focus on transforming complex data into actionable business intelligence. By integrating a strong foundation in SQL and Python with advanced certifications in AWS Cloud and Machine Learning, I bridge the gap between raw infrastructure and strategic decisionmaking. I am committed to leveraging analytical models and intelligent systems to optimize organizational efficiency and drive data-backed growth.

EDUCATION AND TRAINING

BTECH INFORMATION TECHNOLOGY

Marwadi University [30/09/2022 – 12/02/2026]

City: Rajkot | **Country:** India | **Level in EQF:** EQF level 6

Software Development: Advanced proficiency in Native Android Development (Kotlin/Java) and Object-Oriented Programming.
Data Science & Artificial Intelligence: Implementation of Machine Learning models and Natural Language Processing (NLP) using Python, NumPy, and Pandas.
Web & Backend Technologies: Full-stack development utilizing HTML/CSS, JavaScript, and Node.js for scalable server-side logic.
Database & Cloud Management: Designing relational databases with SQL and integrating cloud-based infrastructure via Firebase.
Core Computer Science: Data Structures, Algorithms, Computer Networks, and Operating Systems.
Tools & Version Control: Collaborative development and project management using Git.

CERTIFICATIONS

[Infosys Springboard, 05/08/2025]
Python for Data Science The program focuses on Python fundamentals, data analysis (Pandas, NumPy), and visualization (Matplotlib, Seaborn) for data science applications. It covers data structure manipulation, file handling, and introductory machine learning techniques, tailored for beginners and aspiring data analysts.

Mode of learning: Online

[Google, 10/04/2025]
Android Basics with Compose This Course teaches beginners how to build Android apps using Kotlin and Jetpack Compose, modern UI toolkit. It covers building interactive apps, utilizing Material Design, data persistence with Room, and networking.

Mode of learning: Online

[Oracle Academy , 29/09/2023]
Database Programming with SQL

Mode of learning: Online

[Cisco Academy , 27/02/2024]
NDG Linux Essentials Offers fundamental Linux command-line skills, file management, and open-source concepts. It features integrated browser-based virtual machine labs, preparing students for the Linux Professional Institute (LPI) Linux Essentials Professional Development Certificate.

Mode of learning: Online

[29/03/2025]
LaTeX Unleashed: Hands-On Training for Technical Writing LaTeX Unleashed: Hands-On Training for Technical Writing is designed as a practical, comprehensive training program to help researchers, students, and professionals move away from WYSIWYG word processors to LaTeX for producing high-quality technical documentation. The workshop typically focuses on practical application, enabling users to create professional-looking documents, including research papers, theses, and reports

Mode of learning: Hybrid

SKILLS

Git

Android Development

Android Application Development (Android Studio) / kotlin

Data Analysis

Python (computer programming) / SQL

Web Development

CSS & HTML / Java (computer programming)

LANGUAGE SKILLS

Mother tongue(s): Igbo

Other language(s):

English

LISTENING C2 **READING** C2 **WRITING** C2

SPOKEN PRODUCTION C2 **SPOKEN INTERACTION** C2

Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user

PROJECTS

Polydub (AI Real Time Language Translation Android Application) Polydub is a mobile application that translates and dubs speech in real time, aiming to make videos and audio on Android phones free from language barriers like turning a French podcast into smooth, clear English on the fly. The app grabs system audio(MediaProjection,AudioPlaybackCapture) and slices it into short clips, using a lightweight voice activity detector that stops the moment the sound fades. It then taps the Vosk engine to handle speech recognition right on the device, picking up even a faint whisper. Google's ML Kit Translation models handle the recognized text offline, turning it into another language, and Android's Text-to-Speech then speaks it aloud in a clear, steady voice. Editors use timestamp matching, audio ducking, and time-stretching to keep the voice in step with the lips, so you hear each word as the mouth moves, while the subtitles roll across the bottom of the screen. Running as a foreground service

with floating controls, it lets you keep dubbing in the background and jump in instantly like tapping a button that appears right on top of your video.

Crowdsourced Civic Issue Reporting and Resolution System The Crowdsourced Civic Issue Reporting and Resolution System is a user-friendly digital platform developed to bridge the gap between citizens and local authorities. It provides an easy and effective way for people to report everyday civic problems directly from their devices. Through this system, users can submit complaints related to issues such as potholes, garbage accumulation, water leakage, damaged roads, broken streetlights, and many other public concerns. Each report can include important details like location, description, and supporting images, making it easier for authorities to understand and address the problem. The platform is designed to ensure transparency and accountability by allowing citizens to track the progress of their complaints in real time. Users can view the current status of their reported issues, whether they are pending, in progress, or resolved. This feature builds trust between the public and civic bodies by keeping communication open and visible. On the administrative side, the system provides a dedicated dashboard where officials can review submitted reports, assign tasks to staff members, update issue status, and manage the entire resolution process efficiently. By encouraging active participation from the community, the system helps create a more responsible and responsive civic environment. It reduces the need for manual complaint processes and speeds up problem resolution through organized digital management. The system is also designed to be scalable, allowing it to handle large numbers of users and be expanded to support multiple cities or regions. It can further be integrated with municipal databases and services for smoother operations.
